Features
• Show your screen in real time!
• One2One and One2Many
• Session Login on Your Website
• 256-Bit AES Encryption
• Recording is available on the organizer's side

The Mikogo HTML Viewer

What is the HTML Viewer?

With the award-winning HTML viewer, Mikogo provides even greater flexibility. Besides the normal session login, we offer an even easier way to join a presentation via go.mikogo.info. No download is required to join the session. ActiveX, Java, and Flash are not required. Considering the growing use of restrictive security settings of company networks that often prohibit the download of executables or plug-ins in general, the HTML Viewer offers a major advantage. Another benefit is that the HTML Viewer works seamlessly with Windows, Mac and Linux computers and mobile devices.

The HTML Viewer has been developed especially for online sales presentations and web demos, and is optimal for these use cases. Any concern or hesitation from your new clients towards online presentations is simply and quickly eradicated.

Features of the HTML Viewer

The following table shows a comparison of the features which are available with the HTML Viewer and the connection program respectively. All organizer features such as screen transmission, profile manager, and application selection are available regardless of how the participant chooses to join.

URL for Participants:	HTML Viewer http://go.mikogo.info	Connection Program http://go.mikogo.com
